Semantic Markup Lab

Markup an XHTML document that describes the information shown in the screenshot that your lab instructor hands you in lab. For convenience, the screenshots are also available in digital form on the class website.

Don't worry about the display elements in the screenshot. I'm looking for you to re-create the <u>structure</u> of the document, not the <u>presentation</u>.

Don't forget to indent HTML elements in your code to show their parent/child relationships!

Your XHTML document should validate against the XHTML Transitional 1.0 DTD (validator.w3.org)

You should name your document `markup_lab.html`

When you're finished marking up your document, upload it to `/home/students/nid/public_html/dig3716c/lab2_semantic_markup/`

When everyone is done, your lab instructor will pick some volunteers to display their interpretations and host a discussion.
